Upgrade LSD Differenzial RD5026

Beitrag von „Kuhpa“ vom 5.1.2024, 10:24

Habe da was entdeckt und frage mich bzw. Euch, ob das was taugt:

„The set is made from extremely strong **s6** tool steel. Parts are heat-treated and hardened to 40HRC under the protection of argon to avoid deformation.

For friction shims, we use the same material as OEM LSD clutches to avoid metal shredding. Therefore, shims are perfectly safe for long term usage! They are replaceable too.

Preload is provided with high rate springs, and we get a dynamic lock from 37.5° angled ramps. All of this together gives 25% progressive lock which increases with revs and vice versa.

All parts are made in the N7 quality standard.“
